Use Cases

Below you will see all the use cases our team has completed to date, grouped by features and described by their functionality and their completion status, as follows:

Recommendation Feature:

1. **Gets recommendations from the site (Algorithm recommended movies) - DONE**Recommend movies for users logged in based on many things (friends, demographics, etc.). User must be logged in for this feature to work.

2. Rate/Like/Dislike movies - DONE

User, when logged in, can rate like or dislike a movie.

3. Skip/Dismiss - DONE

Logged in users can now skip/dismiss movies that were recommended to them by their friends

4. Open site to see recommended movies - DONE

Randomized movies recommended to any user when they visit the home page of our site.

5. User rates a movie between 1 and 5 - DONE

User searches for a movie they have watched, and gives a rating for the movie. A user gives the movie a rating from 1 to 5, when 1 is lowest score and 5 is highest score. User can also rerate the movie

6. User can recommend movies to other user - DONE

User must be logged in to be able to use this feature and can recommend movies to other users.

7. Display Average rating Per Movie - DONE

The website also displays the average rating per movie next to the movie name on the main page and on the movie description page.

Search features:

8 Search for friends - DONE

User searches for a friend in their friends list (friend they have already added).

9. Search For Movies - DONE

When a person wants to look up a specific movie. User wanted to research for a specific movie. As a byproduct, the system will also display the relevant movie. The system can also display ads related to the user search.

User Profile Features:

10. Edit/Save user Profile - DONE

When user wants to edit information (profile pic, bio). User needed to login and enter their profile to click the edit button. Click on Edit Profile, and Saved. Edit information about demographics (region). Add more movies/genres they're interested in. User wanted to edit user profile.

11 Delete/deactivate account - DONE

When user wants to delete or deactivate his/her account.

Login feature:

12. Create/Login account - DONE

Site should open to the home page after the user logs in and display our algorithmically generated list of recommended movies for them

13. Logout - DONE

User who registered to the site can sign out.

Friends feature:

14. User Adding Friends - DONE

Users can add friends to their Network. User must be logged in for feature to work.

15. User Removing Friends - DONE

Users can remove friends from their network. User must be logged in for feature to work. Watch later feature:

16. Watch Later -DONE

Users can mark movies that they would like to watch later, which would redirect the users to a watch later page, in which all the movies marked as watch later would appear

17. Top 10-movies personal list - IN PROGRESS, back-end is done.

Registered user is able to see his top 10 movie list

 - 21. Create a Movie Group -NOT STARTED

Super Admin features - DONE, with other functionality

22. Admin User - DONE

Users who are admins can login and see the admin view which allows Manual moderating the sites/stats.

23. Add roles - NOT STARTED YET

24. Manual moderating the sites/stats - DONE

Movie news feature:

25. Movie news - NOT STARTED

A page in which a logged in user can see feeds about up and coming new movies, and details about the characters in it.

To summarize this list, out of the 25 planned use cases we have actually completed 18 use cases, and are still working on 1. We have decided not to pursue some of the use cases listed out of time concerns, and out of the development process of our product which highlighted that some use cases that we declared weren't crucial for what we wanted our users and clients to experience as they use and explore our product but
